DISTRICT CENSUS HANDBOOK
1951

ALIGARH DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,

*Superintendent, Census Operations,
Uttar Pradesh.*

4	List of Primary Schools	232-235

INTRODUCTION

A—THE DISTRICT

1. The district of Aligarh lies in the upper Doab of the Ganga and Yamuna. It is bounded by these two rivers for short distances only, the former separating the district from Budaun for a few miles in the extreme north-east, just as it takes its great bed to the east, while the latter constitutes the dividing line for a similar distance in the north-west between Aligarh and the Gurgaon district of the Punjab. To the north the boundary is purely conventional and is formed by the Anupshahr and Khurja tehsils of Bulandshahr district. On the west and south-west the district marches with the Mat and Sadabad tehsils of Mathura ; while to the south-east and east lie the Jalesar, Etah and Kasganj tehsils of the Etah district. The district has a total area of 1,940 square miles. Its population in 1951 was 15·44 lakhs. It has 6 tehsils, 14 parganas and 18 thanas.

2. Viewed as a whole, the district is a plain of remarkable fertility, sloping gently from the north to south or south-east. The level surface is varied by several depressions formed by the river valleys and natural drainage lines, while the elevations consist merely of slight ridges of sand which initially appear to have been due to fluvial action, though in their present state the conformation of the ground results in large measure from the action of the strong westerly winds. The conformation of the ground is very similar to that of the Doab as a whole. From the low *khadar* or valley of the Ganga the level rises sharply to the high sandy uplands which crown the old flood bank of the river and then descends inland gradually to a depression drained by the Nim and Chhoiya beyond which it rises again to the bank of Kali *nadi*. The latter cuts off the Atrauli tehsil from the rest of the district and this sub-division may be fairly considered as a miniature example of the entire Doab. A cross section of the rest of the district presents much the same feature. Along the right bank of Kali *nadi* is another sandy belt, rising from the low and narrow *khadar* of that stream ; and this is followed by a fertile belt of loam soil which sinks gradually into the broad central depression. The latter traverses the entire district in a south-easterly direction roughly parallel to the course of the Ganga. Entering the north of the Aligarh tehsil it passes through that sub-division into Sikandra Rao occupying practically all but the south-western corner of tehsil and eventually passing into Etah. This tract is characterized by a clay soil, imperfect natural drainage, and numerous *jhils* in which the surface water collects without finding an adequate outlet. In consequence of the resultant saturation the fertility of the country is marked by frequent stretches of barren *usar* and the exudation of salts in the form of *reh*. Beyond this depression the surface rises once more into a level plain of lighter but richer soil, assuming a sandy character in the west of the district. In the north-west the general characteristics of the Doab are maintained. The south-west of the district presents somewhat remarkable features. It is light soiled and distinctly sandy tract of a very homogeneous type. The general slope of the district is extremely regular.

3. The soils of the district are much the same in composition and appearance as those of the Doab as a whole. By far the most common soil is loam, and to this several names are applied according to the proportion of sand present. The good consistent loam known as *matiar* preponderates in every tehsil and occupies about 57 per cent. of the total area. *Pilia*, so called from its yellow colour, being a light sandy soil takes up about 18 per cent., a much higher proportion being found in Khair and Iglas than elsewhere. Heavy clay or *chiknot* is found in depressions, particularly in the broad belt of lowland which runs through the district from north-west to south-east. It covers more than 4 per cent. of the whole area and quite a large share in this amount lies in Sikandra Rao tehsil. *Bhur*, varying in quality from a sandy loam to pure sand, comprises 4 per cent. of the whole area and is most common in Iglas, Khair and Atrauli. This name is also given to the hard gritty soil found near ravines. The *khadar* soils are confined to the Atrauli and Khair tehsils, though a certain amount lies in Aligarh and Sikandra Rao along the course of Kali *nadi*.

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this Volume. The proportion of area under the various categories works out as follows for 1950-51 :

	Actual figures (in acres)		Percentage	
Cultivated area	977,447	78·3		
Culturable waste (excluding current fallow)	64,397	5·2		
Current fallow	26,821	2·1		
Forest	588	..		
Area not available for cultivation of which—	179,537	14·4		
(a) Covered with water	25,517	2·1		
(b) Under sites, roads and buildings	41,346	3·3		
(c) Barren	112,674	9·0		

Topography

Soils

Classification of area

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50, a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percen- tage
Total culturable waste (A+B+C)	66,369	100
A—Area under culturable waste land not available for immediate cultivation	13,334	20·09
(i) Forest under any legal enactment	793	1·20
(ii) Groves	8,171	12·31
(iii) Forest of timber trees	2	..
(iv) Thatching grasses, shrubs and bushes	4,248	6·39
(v) Land kept for grazing	125	0·19
B—Area under culturable waste land available for immediate cultivation, but could not be cultivated	18,891	28·46
Of which due to—		
(i) <i>Kans</i> growth	487	0·73
(ii) Threshing floors	167	0·25
(iii) Malaria
(iv) Floods	1,504	2·27
(v) Lack of drains	517	0·78
(vi) Lack of water	3,670	5·53
(vii) Distance from <i>abadi</i>	155	0·23
(viii) Damage from wild animals
(ix) Other causes	12,391	18·67
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against “B”	34,144	51·45

From the above it will appear that of the total area recorded as cultivable waste, only 51·4 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 80·9 cents of which 65·1* cents have already been brought under cultivation and only 2·2 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and
rainfall

5. The average rainfall for the last quinquennium was about 29·99 inches. During the last 50 years the rainfall has been less than 9 inches in only one year and has been usually over 24 inches.

The district has dry climate very similar to that of the Doab as a whole. The cold weather lasts longer than in the eastern districts. The district during the hot weather experiences the full force of the westerly winds which blow with increasing force till the near approach of the rains. As a rule light showers may be expected during the cold weather, while in the hottest months cyclonic storms from the north-west occasionally extend their influence as far as this district and are of material service in cooling the atmosphere.

Irrigation

6. Irrigation is derived from wells, rivers, tanks, lakes and other sources. In 1950-51 the irrigated area from wells covered 51·1 per cent., by canals 47·5 per cent. and by other sources 1·4 per cent.

Crops

7. More acreage is sown under *rabi* crops than in *kharif* crops. The area under *kharif* crops in 1950-51 was 585,467 acres ; that under *rabi* 649,636 acres ; and that under *zaid* crops 7,230 acres. The principal *kharif* crop is *bajra* while the principal *rabi* crop is wheat followed by barley.

* The figure also includes the area classed as current fallow.

B—ANALYSIS OF THE STATISTICS

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil							Popula- tion (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area <i>per capita</i>
Atrauli	2.7	768	2.24	0.83
Hathras	2.7	951	1.86	0.67
Iglas	1.4	669	1.37	0.96
Khair	2.4	590	2.57	1.08
Koil (Aligarh)	3.9	1,095	2.27	0.58
Sikandra Rao	2.3	676	2.17	0.95
Aligarh district	15.4	792*	12.48	0.81

Population:
General distribu-
tion and density

This district though 25th in order of area stands 11th in the State in respect of popula- tion. The density of district is above the State average. It is 792 per square mile while the average density of the State is 557 only. It has been somewhat inflated by the presence of large towns. The rural density of the district is 668 per square mile, the density of the rural parts of tehsils being : Atrauli 732, Hathras 731, Iglas 663, Khair 574, Koil 697, and Sikandra Rao 634. It is, however, clear from the above table that people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. Khair tehsil has a relatively lower density on account of the *Khadar* area of the Yamuna which it includes. (*Vide* Tables A-I & E)

2. The population in the district in 1951 was 28.5 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades:

Growth of
population

Population							Variation		
Census year				Total	Rural	Urban	Total	Rural	Urban
1901	1,200,822	982,452	218,370			
1911	1,165,680	975,925	189,755	—35,142 (—2.9)	—6,527 (—0.7)	—28,615 (—13.1)
1921	1,061,745	879,783	181,962	—103,935 (—8.9)	—96,142 (—9.9)	—7,793 (—4.1)
1931	1,171,745	972,843	198,902	+110,000 (+10.4)	+93,060 (+10.6)	+16,940 (+9.3)
1941	1,372,641	1,128,372	244,269	+200,896 (+17.1)	+155,529 (+16.0)	+45,367 (+22.8)
1951	1,543,506	1,253,988	289,518	+170,865 (+12.4)	+125,616 (+11.1)	+45,249 (+18.5)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of 11.6 per cent. whereas that of the State decreased by 4.0 per cent. only. During 1901—11, the greater part of the district suffered severely from the epidemic of malaria in 1908 and also from plague. The town suffered more severely. During 1911—21 the loss is accounted for by the influenza epidemic of 1918-19. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period and the population of the district recorded an increase of 45.4 per cent. since 1921 which is well above the increase of 35.5 per cent. in the population of the State during the same period.

The variations in the population of the tehsils during 1941—51 are shown in the mar-

Tehsil						Percentage variation (1941—51)
Aligarh district	+12.4
Atrauli	+12.4
Hathras	+12.2
Iglas	+8.1
Khair	+12.5
Koil (Aligarh)	+16.6
Sikandra Rao	+9.6

ginal table. The larger increase in Koil tehsil is due chiefly to the growth of Aligarh city. Otherwise, the increase has been spread uniformly except in tehsils Iglas and Sikandra Rao which have gained smaller increase.

* According to the area given by the Surveyor General it is 796,

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

					Total	Rural	Urban
<i>Mean decennial birth-rate</i>							
1941—50	26.0	24.2	34.0
1931—40	37.8	37.4	39.9
1921—30	39.5	41.0	32.1
<i>Mean decennial death-rate</i>							
1941—50	15.7	14.1	22.7
1931—40	21.9	21.0	26.6
1921—30	26.7	26.7	26.9
<i>Mean decennial rate of natural increase</i>							
1941—50	10.3	10.1	11.3
1931—40	15.9	16.4	13.3
1921—30	12.8	14.3	5.2
<i>Mean decennial growth-rate</i>							
1941—50	11.7	10.5	17.0
1931—40	15.8	14.8	20.5
1921—30	9.9	10.0	8.9

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken roughly to be indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable loss of population on the balance of migration during 1921—30, an insignificant loss during 1931—40 and quite a large gain during 1941—50.

The average yearly mortality from various causes in the district during 1941—50 were as follows :

Causes					No. of deaths	Percentage of total deaths
Fever	19,150	83.7
Dysentery and diarrhoea	606	2.6
Respiratory diseases	982	4.3
Plague, cholera and small-pox	406	1.8
Others	1,738	7.6

As in the rest of the State, "fever" is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. Small-pox, cholera and plague appear to have lost their intensity in the district. (*Vide* Table I, Part III of this Volume)

Migration

4. About 87.3 per cent. of the people enumerated in the district at the census of 1951 were born there, 11.3 per cent. were born in other districts of the State, 0.8 per cent. were born in other parts of India and only 0.6 per cent. came from other countries. Of the immigrants from the districts of the State as many as 170,042 (males 26,786, females 143,256) are from other districts of the same natural division and only 4,854 (males 2,617, females 2,237) are from other parts of the State. The sex-proportion of migrants suggests that most of the migration from the neighbouring district is marriage migration. Of 10,022 immigrants from the adjacent States 3,745 (males 1,560, females 2,185) are from Punjab and 3,415 (males 1,232, females 2,183) are from Rajasthan. Some of this migration is also marriage migration. The movement to the city of Aligarh from Punjab (males 726, females 496), appears to be of the semi-permanent type and nearly in half the number of cases men are unaccompanied by their families.

Of the immigrants who have come from territories beyond India 9,222 persons (males 5,007, females 4,215) were born in Pakistan and 263 persons (males 192, females 71) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 9,880 in the district. Of the immigrants born in other territories 154 (males 125, females 29) are Nepal-born.

Of the 24 non-Indian nationals, 5 belong to Nepal, 7 are Africans, 4 are Americans and the rest are from other countries.

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures are exhibited in the marginal table. (Figures of area shown under census year are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 62·2 cents from 82·1 cents in 1951. The magnitude of this drop is about one fourth of the 1921 level.

Decline of cultivation *per capita*

Census year	Population	Not Area sown (in acres)	Area of cultivation <i>per capita</i> (in cents)
1921	..	1,061,745	872,650
1931	..	1,171,745	900,435
1941	..	1,372,641	909,600
1951	..	1,543,506	959,377

It means that (other things being equal) every man and woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 245,761 acres in 1921. It decreased to 224,746 acres in 1931. There was a further decrease to 212,400 acres in 1941. But in 1951 there was an increase to 250,042 acres. The figures of double crop cultivation *per capita* in cents are given below :

Double crop area *per capita*

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation <i>per capita</i> in cents	16·2	15·5	19·2	23·1
Unirrigated double crop cultivation <i>per capita</i> in cents	12·2	9·3	11·7	13·5
Irrigated double crop cultivation <i>per capita</i> in cents	4·0	6·2	7·5	9·6

It is evident that the double cropped area *per capita* is well below the figure for 1921. It has not kept pace with the growth of population.

7. The average area irrigated was 456,579 acres in 1921. The figures were 466,037 acres for 1931, 473,333 acres for 1941 and 491,382 acres for 1951. The average area irrigated more than once was 101,948 acres in 1921, 87,544 acres in 1931, 84,718 acres in 1941 and 61,379 in 1951.

The figures of irrigation *per capita* are shown in the table below :

Irrigated area *per capita*

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation <i>per capita</i> in cents	27·9	28·3	32·3	33·4
Irrigated double crop cultivation <i>per capita</i> in cents	4·0	6·2	7·5	9·6

The trend is distinctly towards a decline.

8. During the quinquennium 1916—21 79·0 per cent. of the cropped area was under food crops and only 21·0 per cent. of it was under non-food crops. Thirty years after during 1946—51 the cropped area under food crops has increased to 88·1 per cent. and that under

Cropped area

non-food crops was only 11.9 per cent. The proportionate area under different crops in the district during 1911 and 1951 was as below :

		Percentage of cropped area under									
Quinquennial average		Total cropped area	Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others	
1911—16..	1,111,015	0.2	15.6	16.4	8.1	10.1	7.6	12.3	29.7
1916—21..	1,093,269	0.3	13.9	16.1	8.0	12.0	8.7	9.8	31.2
1921—26..	1,110,895	0.2	17.0	13.5	8.3	10.5	7.3	15.4	27.8
1926—31..	1,127,240	0.3	15.7	14.9	8.1	11.3	8.1	10.8	30.8
1931—36..	1,108,913	0.2	15.6	14.2	8.6	11.8	8.0	10.7	30.9
1936—41..	1,129,705	0.3	17.4	14.0	7.8	12.7	7.9	11.1	28.8
1941—46..	1,153,304	0.3	17.3	14.6	5.5	19.7	8.4	8.6	25.6
1946—51..	1,217,412	0.7	16.5	14.3	3.6	20.5	8.2	10.4	25.8

Cultivation of cotton and indigo has very much declined. In 1901-02 the area under cotton crop was 94,357 acres ; in 1950-51 it was only 10,598 acres. In 1901-02 the area under indigo was 27,165 acres while in 1950-51 it was only 69 acres. The area under sugarcane has increased. It was 40,131 acres in 1950-51 against 6,337 acres in 1901-02.

Live-stock
ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes has been rising since 1930 and now the figure stands at 6.8 lakhs.

The number of working cattle and buffaloes in the district has been slightly increasing since 1935. The figure was about 1.6 lakhs in 1935 and 2.0 lakhs in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 0.83 lakhs in 1944 to a little over 0.99 lakhs in 1951 due to apparently progressive fractionalization of holdings. The number of carts started rising since 1930 and stands now at over 22,000. The average net cultivated area per plough works out to 9.9 acres in 1951 as against 11.9 acres in 1920 and the average net cultivated area per pair of working cattle works out to 9.7 acres in 1951 as compared to 11.3 acres in 1935.

Breeding cows and she-buffaloes which increased from 2.09 lakhs to 2.34 lakhs during 1935—44 have gone up to 2.77 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 21 and 59 respectively owing to the poor milk yield; the share of milk per head is only a few ounces per day.

The number of sheep which had been almost stationary at about 64 thousand during 1920—30 has gone down to 19 thousand in 1951 apparently owing to shortage of pasture. Goats have been going down in number since 1935 when they were over 1.08 lakhs. Their number in 1951 was 50,173, the reduction during 1944—51 alone being 40.9 per cent.

Horses and ponies also are declining in number. Donkeys during the same period were increased to about 20,000.

Poultry has shown slight rise since 1944 from about 30 thousands to 33 thousands.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
212	230	12	33	21	33

10. To sum up, the population of the district is growing up at the biological natural rate of increase since 1921. But, on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased. In consequence the magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is a threat to the district.

11. The district has 1,746 villages and 18 towns. Out of about 15·44 lakhs of people who were counted at the census of 1951, 12·54 lakhs were found in the villages and 2·90 lakhs in the towns i.e., there are as many as 812 people per 1,000 of population live in rural areas and 188 in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

Villages and towns

The rural population per inhabited village works out to 718. Nearly half the number of villages comprise of a single compact site while the remaining have hamlets attached to them. The total number of hamlets in the district is 3,078. The population per hamlet is only 407. The medium sized village with inhabitants numbering between 500 to 2,000 — is the dominant type in the district. Of the rural population 61·2 per cent. live in such villages, 19·3 per cent. in small villages of population under 500, 19·1 per cent. in large villages of a population between 2,000—5,000 and only 0·4 per cent. in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Aligarh city has a population of 141,618, i.e., 48·9 per cent. of the urban population of the district and 19·6 per cent. of it lives in Hathras city. Only 12·7 per cent. of the urban population lives in towns of population under 5,000 (viz. Purdilnagar, Pilkhana, Sasni, Harduaganj, Mursan, Jattari, Chharra, Bijaigarh, Beswan and Hasayan); and the remaining 18·8 per cent. of the population lives in towns of population between 5,000 and 20,000 (viz. Kauriaganj, Mendu, Atrauli, Sikandra Rao, Jalali and Khair). It is significant to note that Aligarh city has recorded an increase of 25·7 per cent. in 1941—51. The increase in its population since 1921 has been 111·5 per cent. Hathras city has shown increase of 20·5 per cent. since 1941 and of 46·1 per cent. during 1921—51. The towns of Atrauli, Sikandra Rao, Pilkhana, Harduaganj, Mursan, Bijaigarh, Beswan and Hasayan appear to be declining. (Vide Tables A-III and A-IV)

12. Out of the total population of 1,543,506 (rural 1,253,988, urban 289,518) 602,244 (rural 348,117, urban 254,127) or 39·0 per cent. depend on non-agricultural occupations. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also of Aligarh and Hathras cities under the different livelihood classes :

Occupations :
Livelihood pattern

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	61·0	48·5	2·5	9·1	0·9	39·0	13·2	8·1	2·3	15·4
Rural	72·2	37·9	2·8	10·8	0·7	27·8	10·1	3·9	1·5	12·3
Urban	12·2	7·7	1·3	1·7	1·5	87·8	27·0	26·1	6·1	28·6
Aligarh city ..	4·6	1·7	0·6	0·6	1·7	95·4	31·2	26·0	6·4	31·8
Hathras city ..	3·2	2·3	0·2	0·2	0·5	96·8	28·5	35·8	9·0	23·5

This district is one of the less agricultural districts of the State. Here only 61·0 per cent. of people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 1,013,704 persons (males 346,928, females 666,776) or 65·7 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 66·2 and that among the non-agricultural classes as 64·8. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 35,531 persons (males 17,138, females 18,393) or 2·3 per cent. of the population are earning dependants. Among the agriculturists their proportion is 2·31 per cent. and among the non-agriculturists 2·29 per cent. The remaining 494,271 persons (males 467,067, females 27,204) or 32·0 per cent. of the population consists of self-supporting persons. Of the self-supporting persons 296,315 (males 288,756, females 7,559) belong to agricultural classes and 197,956 (males 178,311, females 19,645) to the non-agricultural classes. On an average self-supporting person maintains two non-earning dependants.

Of the 197,956 persons belonging to the non-agricultural classes 3,344 persons (rural 1,901, urban 1,443) earn their livelihood from non-productive sources. Of the remaining 194,612 self-supporting persons (rural 117,991, urban 76,621) 4,896 (rural 425, urban 4,471) or 2·5 per cent. are employers, 41,881 (rural 14,057, urban 27,824) or 21·5 per cent. are employees and 147,835 persons (rural 103,509, urban 44,326) or 76·0 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the Economic Divisions is as follows :

Name of division						Self-supporting persons by divisions
All industries and services						10,000
0—Primary industries not elsewhere specified.						259
1—Mining and quarrying						9
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof						1,704
3—Processing and manufacture—metals, chemicals and products thereof						619
4—Processing and manufacture—not elsewhere specified						866
3—Construction and utilities						768
6—Commerce						1,916
7—Transport, storage and communications						599
8—Health, education and public administration						631
9—Services not elsewhere specified						2,629

Among the large scale industries of the district the principal are cotton mills, cotton ginning and pressing, oil mills and enamelling. Among the cottage industries the principal are handloom cloth weaving (cotton), leather tanning, cotton carpets, calico printing, brass and copper wares, locks, steel trunks, iron safes, *moondhas* and *chiks* and rubber goods.

Variation in
livelihood pattern

13. In the district the proportion of population depending on agriculture for their livelihood was 60·8* per cent. in 1951. The unfortunate fact is that the agricultural population had been increasing ever since 1901 when the figure stood at 46·3 per cent. It was 55·8 per cent. in 1911 and 60·9 per cent. in 1921. The speed of the process now seems to have been arrested. But the actual number of persons who depend on agriculture has increased to 938,638 in 1951 from 646,250 in 1921 or by 45·2 per cent. while the cultivated area has remained almost unchanged. This has resulted in the progressive fragmentation and sub-division of holdings and increased pressure on impoverished soil. There also appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers in the total population. In 1951 it was only 34·3 per cent. (agricultural 20·4 per cent., non-agricultural 13·9 per cent.) against 42·8 per cent. (agricultural 23·8 per cent., non-agricultural 19·0 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 57·2 per cent. (agricultural 37·1 per cent., non-agricultural 20·1 per cent.) in 1921 to 65·7 per cent. (agricultural 40·4 per cent., non-agricultural 25·3 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by a greater diversion of the population to cottage and other industries and by providing secondary means of occupation to the agriculturists that the present economy of the district can be improved. (*Vide* Tables B-I, B-II and B-III)

Houses and house-
holds

14. There were 223,186 occupied houses in the district—182,922 in villages and 40,264 in towns. That gives an average of 6,855 persons per 1,000 houses or 6·9 persons per house in the rural areas and 7,190 persons per 1,000 houses or 7·2 persons per house in urban areas. There were 298,842 households in the district—243,954 in villages and 54,888 in towns. That gives an average of 5,136 persons per 1,000 households or 5·1 persons per

Census year	Persons per 1,000 households of	
	Rural Population	Urban Population
1921	4,577	4,289
1931	4,693	4,559
1941	5,130	5,322
1951	5,136	5,188

household in rural areas and 5,188 persons per 1,000 households or 5·2 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has increased since 1921 and is bigger than the average state rural household (5·07). The urban household has registered a decrease since 1941 apparently due to large gains by migration.

Out of 5,136 persons in every 1,000 rural households 2,757 are males and 2,379 are females. There is a male excess numbering 378 in every 1,000 households. Out of 5,188 persons in every 1,000 urban households 2,803 are males and 2,385 are females. There again is a male excess numbering 418 in every 1,000 households. The type of migration will account for the difference.

Information regarding types of household and household relationships was collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 5,047 persons. (males 2,723, females 2,324) in the district. The corresponding figure for the total count is 5,146.

* This figure includes earning dependants according to their secondary means of livelihood, while the figure 610 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

The table below shows the distribution by size of 1,000 sample households.

Description					Small with 3 members or less	Medium with 4—6 mem- bers	Large with 7—9 mem- bers	Very large with 10 members or more
Total	251	476	196	77
Rural	242	482	201	75
Urban	284	452	177	87

Medium households are the dominant type in the villages as well as in the towns.

Family composition of 1,000 sample households is as follows :

							Number in 1,000 house- holds
A	{	Heads of households	{	Male (married)	689	
			{	Male (widowers)	261	
			{	Females	50	
			Wives of heads of households	689		
							<hr/>
							1,689
B	{	Sons of heads of households	1,136			
		Daughters of heads of households	700			
							<hr/>
							1,836
C	{	Male relations of heads of households (other than sons)	584			
		Female relations of heads of households (other than daughters)	803			
							<hr/>
							1,387
							<hr/>
D Persons unrelated to the head of the household :							
		{	Males	53		
		{	Females	82		
							<hr/>
							135
							<hr/>
GRAND TOTAL							5,047

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

15. In the district as a whole the sex-ratio was 857 i.e., there were 857 females to every 1,000 males. It varied among the tehsils. The lowest value was 844 in Iglas tehsil. The highest value was 875 in Atrauli tehsil. The ratio in other tehsils was : Hathras 845, Khair 865, Koil 853 and Sikandra Rao 858.

Sex-ratio

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 863 while that in towns is only 832. The sex-ratio for Aligarh city was 812 and for Hathras 835. Male migration to the towns, unaccompanied by families, accounts for this.

The corresponding figure of sex-ratio for the district as a whole was 845 in 1921, 842 in 1931 and 843 in 1941 against 857 in 1951. The sex-ratio has been rising since 1931.

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately.

Age structure

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	14.5	7.3	7.2	7.3	7.3	7.2	6.8
Boys and girls	5—14	24.2	13.0	11.2	12.9	11.3	13.2	11.0
Young men and women	15—34	32.7	17.2	15.3	17.0	15.4	18.5	15.5
Middle-aged men and women	35—54	20.6	11.5	9.1	11.6	9.2	11.2	8.5
Elderly persons	55 and over	8.0	4.7	3.3	4.7	3.3	4.8	3.3

It will be seen that the population is progressive. 38·7 per cent. of the population is of age under 15 and only 8·0 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 5,378 males and 4,622 females*. Among them 2,692 males and 1,849 females are unmarried. If we reckon males and females together, the unmarried people are 45·4 per cent. of the population.

Of the males 50·0 per cent. were unmarried, 42·3 per cent. were married and 7·7 per cent. were widowed or divorced. Among the females 40·0 per cent. were unmarried, 49·3 per cent. were married and 10·7 per cent. were widowed or divorced.

Of the married males 0·8 per cent. were of ages below 15, 49·3 per cent. were of 15—34, 38·4 per cent. were of ages 35—54 and 11·5 per cent. were of ages 55 and over. Among the married females 3·5 per cent. were of ages below 15, 62·0 per cent. were of ages 15—34, 30·2 per cent. were of ages 35—54 and 4·3 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 8·1 per cent. of the males and 0·3 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is not common. Only 0·9 per cent. of the males aged 0—14 and 4·4 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·6 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Nepali (0·01 per cent.), Punjabi (0·22 per cent.), Bengali (0·03 per cent.) and Sindhi (0·02 per cent.). Of the 15·44 lakhs of people in the district only 4,977 or 0·3 per cent. were bilingual (in an Indian language). Those whose mother-tongues are other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 3,616 or 72·7 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 8,693, Muslims 1,916, Sikhs 54, Christians 29, Jains 22 and others 6; of 10,000 population in villages the numbers are : Hindus 9,102, Muslims 824, Sikhs 45, Christians 18, Jains 6 and others 5, and of 10,000 population in towns the numbers are : Hindus 6,921, Muslims 2,806, Sikhs 94, Christians 80, Jains 88 and others 11. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case with the other parts of the State.

There are 257 thousand Scheduled Castes in the district. Their number per 10,000 of population works out to 1,662. In villages they are 1,805 for every 10,000 and in the towns their number per 10,000 is only 1,042. In the district there are 67 Anglo-Indians who are mostly concentrated in the urban areas. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 9,880 (males 5,352, females 4,528). Most of them have settled in the towns. Of them 92·2 per cent. have come from West Pakistan, 0·5 per cent. from East Pakistan and 7·3 per cent. from areas which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy in 1951 was 21·3 in the district while that of female literacy was 4·9 only. As compared to this the percentage of literates in 1931 was 9·8; among females the percentage of literates in 1931 was 1·2†. On January 1, 1951, there were 610 primary schools in the district with enrolment of 57,030. (*Vide* Table D-VII)

C—EXPLANATORY NOTE ON THE STATISTICS

The statistics in this volume have been presented in three parts:

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical

* The corresponding figures for the total count are 5,385 and 4,615.

† The number per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
242	115	54	15

and Health Services ; Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports ; Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Processing of
census data

Agricultural Classes—

- I—Cultivators of land wholly or mainly owned ; and their dependants
- II—Cultivators of land wholly or mainly unowned ; and their dependants
- III—Cultivating labourers ; and their dependants
- IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

- V—Production (other than cultivation)
- VI—Commerce
- VII—Transport
- VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (a) *rural tracts*, comprising the rural population of each tehsil, (b) *urban city tracts*, comprising the population of areas which had been declared as cities, (c) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Tracts

- Part I-B—Subsidiary Tables
- Part II-A—General Population Tables
- Part II-B—Economic Tables
- Part II-C—Age and Social Tables

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Explanatory notes

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

- (i) Self-supporting persons ;
- (ii) Non-earning dependants ; and
- (iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

"A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

- (a) All self-supporting persons of agricultural Class IV.
- (b) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):
 - (i) Persons living principally on income from non-agricultural property;
 - (ii) Persons living principally on pensions, remittances, scholarships and funds;
 - (iii) Inmates of alms-houses and recipients of doles;
 - (iv) Beggars and vagrants; and
 - (v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators:

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as manager, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e. g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) and (ii)—For the purpose of this table a "displaced person" has been defined as follows:

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
